

SPECULAR TEMPUS FIRMWARE UPDATE HISTORY

V3.0

(October 2017)

- > 24 additional preset space (accessible via MIDI). This gives a total preset space of 32.
- > 'Tap-Tempo Out' functionality via Aux-Out.
- > Beats-per-Minute (BPM) tempo display option.
- > Tempo information is now displayed while performing tap-tempo.
- > On-board MIDI Channel configuration access.

V3.5

(December 2017)

- > Access to whole preset space via Aux switch.
- > Extended max delay time to 800 ms for algorithms that were originally limited to 600 ms.
- > Tempo can now be viewed by pressing tap switch once.
- > Improved MIDI processing robustness.
- > Firmware version info displayed at power up.

V3.7

(March 2018)

- > MIDI Clock.
- > All-Preset access on the pedal itself.
- > Expanded and optimized Aux-In control.
- > 3 new Aux-In functions : *Warp Dotted*, *Warp Half*, *Warp Triplet*
- > Global Kill-Dry (useful for parallel FX-Loop).
- > Fave Preset now covers the whole preset space.
- > Two taps-averaging options.
- > Fixed some minor bugs.
